

Country fact sheet: France

1. Total greenhouse gas emissions

Figure 1: Left hand side: Total greenhouse gas emissions (incl. international aviation) 1990-2020 (index 1990 = 100 %). Right hand side: Greenhouse gas emissions by sector¹ – historical emissions 1990-2019, proxy 2020, projections WEM 2021-2030 (Mt CO₂-eq).

¹ The sectors in the figure correspond to the following IPCC sectors: Energy supply: 1A1, 1B and 1C. Energy use in manufacturing industries: 1A2. Industrial processes and product use: 2. Transport: 1A3. Other energy use: 1A4, 1A5 and 6. Agriculture: 3. Waste: 5. International aviation: 1.D.1.a.

Figure 2: Share of emissions covered by the ETS and the ESD (2019).²

2. ETS emissions

Figure 3: ETS emissions 2005-2020 (Mt CO₂-eq).³

² Excluding international aviation and NF₃.

³ The scope of ETS was extended from 2013. To reflect the current scope of ETS, estimates made by EEA are included in the figures from 2005 to 2012. The estimates cover only emissions from stationary installations.

3. Emissions in Effort Sharing sectors

Figure 4: Left hand side: Emissions and targets under the Effort Sharing Decision/ Effort Sharing Regulation 2020 and 2030 as percentage change from 2005. Right hand side: Emissions, annual emission allocations (AEAs) and accumulated surplus/ deficit of AEAs under the Effort Sharing Decision 2013-2020 (Mt CO₂-eq).

4. Land use, land use change and forestry

Figure 5: Reported and accounted emissions and removals from LULUCF (Mt CO₂-eq.)⁴

Reported quantities under the Kyoto Protocol for France show net removals of, on average, -46.4 Mt CO₂-eq for the period 2013 to 2019. In this regard, France contributes with 13.5% to the annual average sink of -344.9 Mt CO₂-eq of the EU-27. Accounting for the same period depicts net average annual credits of -0.8 Mt CO₂-eq, which corresponds to 0.7% of the EU-27 accounted sink of -115.0 Mt CO₂-eq. Reported net removals show a decreasing trend from 2013 to 2015 that levelled off thereafter. Accounted quantities show the same pattern but more accentuated, with net credits in 2013, 2014 and 2016 and net debits in all other years. France is one of 14 EU Member States that show net debits for at least one year in this preliminary accounting exercise.

The dominating reported activity is Forest Management with removals. Removals by Afforestation/Reforestation and emissions by Deforestation make up a sizable portions of the emission budget of the LULUCF sector. Removals by Forest Management decrease markedly by 14.7 Mt CO₂-eq between 2013 and 2019. The reason for this decrease is a combination of aging forests with increased mortality and lower production, removing less CO₂ from the atmosphere, and of increased harvest.

Credits by Afforestation/Reforestation are slightly higher than debits by Deforestation; both with an increasing trend over the seven-year period. Credits by Forest Management in 2013 and 2014 turned into significant debits of up to 6.9 Mt CO₂-eq in 2019. France is one of 13 EU Member States with debits by Forest Management for at least one year.

⁴ The differences between reported and accounted emissions from LULUCF under the Kyoto Protocol are described in the 'explanatory note on LULUCF – accounted and reported quantities under the Kyoto Protocol'.
