

# Country fact sheet: France

## 1. Total greenhouse gas emissions

**Figure 1: Left hand side: Total greenhouse gas emissions (excl. international aviation) 1990-2018 (index 1990 = 100 %). Right hand side: Greenhouse gas emissions by sector<sup>1</sup> – historical emissions 1990-2017, projections 2018-2030 (Mt CO<sub>2</sub>-eq).**

**Figure 2: Share of emissions covered by the ETS and the ESD (2017).<sup>2</sup>**

<sup>1</sup> The sectors in the figure correspond to the following IPCC sectors: Energy supply: 1A1, 1B and 1C. Energy use in manufacturing industries: 1A2. Industrial processes and product use: 2. Transport: 1A3. Other energy use: 1A4, 1A5 and 6. Agriculture: 3. Waste: 5. International aviation: memo item.

<sup>2</sup> Excluding international aviation, CO<sub>2</sub> from domestic aviation and NF<sub>3</sub>.

## 2. ETS emissions

Figure 3: ETS emissions 2005-2018 (Mt CO<sub>2</sub>-eq).<sup>3</sup>

## 3. Emissions in Effort Sharing sectors

Figure 4: Left hand side: Emissions and targets under the Effort Sharing Decision/ Effort Sharing Regulation 2018, 2020 and 2030 as percentage change from 2005. Right hand side: Emissions, annual emission allocations (AEAs) and accumulated surplus/ deficit of AEAs under the Effort Sharing Decision 2013-2020 (Mt CO<sub>2</sub>-eq).

<sup>3</sup> The scope of ETS was extended from 2013. To reflect the current scope of ETS, estimates made by EEA are included in the figures from 2005 to 2012. The estimates cover only emissions from stationary installations.

#### 4. Land use, land use change and forestry

**Figure 5: Reported and accounted emissions and removals from LULUCF (Mt CO<sub>2</sub>-eq.)<sup>4</sup>**

Reported quantities under the Kyoto Protocol for France show net removals of, on average, -47.7 Mt CO<sub>2</sub>-eq for the period 2013 to 2017. In this regard, France contributes with 11.6% to the annual average sink of -411.9 Mt CO<sub>2</sub>-eq of the EU-28. Accounting for the same period depicts net average annual credits of -2.1 Mt CO<sub>2</sub>-eq, which corresponds to 1.9% of the EU-28 accounted sink of -111.9 Mt CO<sub>2</sub>-eq. Reported net removals and accounted net credits show a decreasing trend since 2013. France is one of ten EU Member States that show net debits for at least one year in this preliminary accounting exercise.

Dominating reported quantities are removals by Forest Management with a remarkable decrease of 9.6 Mt CO<sub>2</sub>-eq between 2013 and 2017. Removals by Afforestation/Reforestation and emissions by Deforestation make up a smaller portion of the emission budget of the LULUCF sector and remain stable.

Accounted emissions and removals of France show a decline due to decreasing credits by Forest Management. Debits by Deforestation are slightly higher than credits by Afforestation/Reforestation and credits by Forest management dropped to -0.3 Mt CO<sub>2</sub>-eq in 2017.

<sup>4</sup> The differences between reported and accounted emissions from LULUCF under the Kyoto Protocol are described in the 'explanatory note on LULUCF – accounted and reported quantities under the Kyoto Protocol'.

## Data sources

Figure 1: Annual European Union greenhouse gas inventory 1990–2017 (EEA greenhouse gas data viewer: <https://www.eea.europa.eu/data-and-maps/data/data-viewers/greenhouse-gases-viewer> ). *Approximated EU greenhouse gas inventory 2017* (European Environment Agency). Member States national projections, reviewed by the European Environment Agency.

Figure 2: Verified ETS emissions abstracted from European Union Transaction Log 21.10.2019 (EEA ETS data viewer: <https://www.eea.europa.eu/data-and-maps/dashboards/emissions-trading-viewer-1>). ESD data from European Commission: *Commission Implementing Decision (EU) on greenhouse gas emissions for each Member State for the year 2017 covered by Decision No 406/2009/EC of the European Parliament and of the Council* (forthcoming).
